Risk Profile

Investment policy

The investment objective of Anthilia White is to produce positive absolute returns with low volatility and low correlation with global fixed income and equity markets. The Sub-Fund aims to achieve this objective by investing in a globally diversified portfolio of the following securities:

- Equity and equity related securities;
- Fixed income securities which may include any type of floating or fixed rate government or investment grade corporate debt security ;
- Short-term deposits and money market instruments which may include commercial paper and CDs;
- Structured financial instruments listed or traded on one or more Recognised Exchanges. No more than 10% of net asset value will be invested in such instruments. The Sub-Fund may utilise derivative instruments, such as futures, to hedge market exposure. The Sub-Fund will not leverage itself through the use of derivatives by exceeding an aggregate exposure of 100% of NAV.

Anthilia Capital Partners SGR

Exposure to fixed income

Right: fund net exposure to fixed income, divided between corporate & government bonds. Any structured bonds or fixed income ETFs are included in the corporate bonds category.

Correlation

Correlation is calculated between the fund's daily performances over last twelve months and to those of total return global equity index: NDDLWIF Index.

The correlation of an absolute return product with the equity market is expected on average below the 0.6 / 0.5 level. Lower is the correlation, more the fund qualifies as an alternative product, offering yields uncorrelated to single market indexes.

Twelve months correlation may change significantly in comparison to the historical average since fund's inception. In a few circumstances, higher level of risk premium may persuade Fund manager to implement investment strategies with higher correlation to equity markets.

Dynamics of Portfolio Volatility

Portfolio's volatility on a one year period is calculated multiplying standard deviation of daily performances by an annualization factor. Sample returns are relative to last twelve months and depends on the volatility of markets where the fund is invested.

Anthilia White distinguishes itself by a very low volatility, comparable to the risk of short term government bonds.

Asset allocation

Right: dynamic of sharpe ratio over last twelve months.

Below: average portfolio's weight to each asset class

Average asset allocation since inception

Equity & convertibles	6,22%
Duration	28,93%
Bond	39,08%
